

E-Z flow II

A no-metal version of the ever-popular E-Z Flow

Disposable panel type air filter for furnace and central air.

At first glance, the E-Z Flow II air filter looks identical to the ever-popular standard E-Z Flow. Until you turn them both over. The standard E-Z Flow has a metal media retainer grill on one side of the filter media. E-Z Flow II does not.

Instead of a metal media retainer, a very fine spray of fiberglass is blown onto E-Z Flow II's media surface fibers. That creates a tough mesh on both faces of the filter media. This mesh takes the place of the metal grill to provide structural integrity.

Otherwise identical to standard E-Z Flow.

Frame is heavy, moisture-resistant chipboard, made in a one-piece configuration to eliminate corner separation.

Media is continuous filament spun glass, colored blue. Shows dirt from air filtration like it's supposed to, but not from handling in your store.

Sealing is done with tough hot-melt adhesive. E-Z Flow II's tough surface mesh actually provides a better surface grip for the adhesive than many filters that use metal retainers.

UL Class II mark for flammability appears on every filter frame.

Color coded, UPC marked. Like the E-Z Flow, E-Z Flow II air filters are color coded by size, according to industry standard. The logo, graphics, and point-of-sale information is printed in green, red, orange, light blue or dark blue, according to color code. Size and UPC code are printed in black.

Size and UPC repeat every 18 inches on the frame. Every size filter has a different UPC code, so store pricing can be set as desired.
