

**PRODUCT DATA SHEET****■ MAC 10® Original Fan Filter Introduction****The Original Fan Filter Unit**

The MAC 10® Original fan filter unit (FFU) was the first to combine low sound, lower watts, and a low profile. The MAC 10® Original Standard provides one of the lowest sound levels of any FFU in the industry measuring at 51 dBA. The Original runs at only 310 watts at 90 FPM and uses less energy than older, traditional fan filter units which lowers operating costs. The MAC 10® Original does all this while maintaining a low profile, measuring less than 13" (330 mm).

**Typical Applications**

The MAC 10® Original is primarily used in critical environments requiring clean air solutions. These include clean-rooms, pharmaceutical compounding, semiconductor and microelectronic manufacturing, and healthcare facilities.

**Multiple Housing Styles**

The MAC 10® Original comes in three different style configurations to fit the needs of the clean space.

**STD** - Standard Filter: filter replaced from above ceiling

**RSR** - Roomside Removable Filter: filter replaced from below ceiling

**RSRE** - Roomside Removable Motor and Filter: filter and motor replaced from below ceiling
